

LUKAS

Germany's finest hydraulics.

**NEW: With increased
work safety**

FAST & SAFE ON TRACK.

The leading rerailing system made in Germany.

Powering

Controlling

Lifting

Traversing

DON'T LOSE A SECOND.

Opt now for the leading system.

The thoughtfully designed **LUKAS** rerailing system has been the global leader for decades. Invest in true quality and in a product that helps you get derailed vehicles of all kinds back on track quickly, precisely and safely and gets your tracks back in service as soon as possible while minimising your downtime expenses.

The DUO traversing unit – the smart solution

Only with **LUKAS** can you move a load over the entire bridge length in both directions with millimetre precision at a safe distance from the control desk – without the need for manual repositioning!

With separate oil flows, you can drive the lifting cylinders individually or synchronously as needed using identical hydraulic cylinders operated from the control desk. No more constant adjustments – now your job is simple and safe. For you that means working with top safety and convenience from outside the danger zone. Make the change now!

System components

- + Motor pump
- + Control desk
- + Telescopic cylinders
- + DUO traversing unit
- + Mechanical aids including rerailing bridge, roller carriage and distance bars
- + Pulling unit
- + Long-stroke cylinders and accessories for uprighting overturned rail vehicles

LUKAS rerailing systems work with hydraulics, allowing effortless lifting and lateral shifting of even the heaviest rail vehicles. The required oil pressure is generated by a high-quality motor pump, while the load can be lifted and lowered and the hydraulic cylinders laterally shifted with precision from the control desk.

The top benefits at a glance

Smart & safe

Our rerailing equipment features outstanding user-friendliness and well-designed technology, as demonstrated by its high level of user safety: you can operate our systems at a safe distance. This clever system takes no risks and counteracts unfavourable load distributions. A pressure gauge is assigned to every oil flow or to every lifting or traversing cylinder, making the operating pressure visible.

Strong & fast

Work with the internationally proven pressure of 530 bar and a smart traversing system that shortens procedures and saves valuable time.

Compact & light

All components are very compact thanks to their high operating pressure and lightweight design, so you have more space in your rail-road vehicle and can transport your rerailing equipment to its destination easily and set it up there effortlessly.

Top quality & versatility

Made in Germany: **LUKAS** rerailing systems are developed and produced in Germany, so they meet the highest quality standards.

A strong partner – from the start.

Get exactly what you need: We'll assist you with your individual rerailing concepts. We'll work out the exact requirements for various scenarios

tailored to your needs and provide detailed information about the relevant products. Just contact us!

➤ Master powerful forces safely.

GC 650-2POWER

PC 650-2POWER

➤ Hydraulic power units

You can rely on our compact power sources to supply the power you need for all equipment in the unique **LUKAS** rerailing system. Get a strong power source with the powerful P 650 motor pumps and save valuable time on every step while easily minimising sources of error.

Well-designed: smart and convenient

Their compact, low-weight design makes handling easy. Ergonomically positioned retractable handles make them easy to carry and efficient to store. Practical quick couplers secure the load and prevent accidental uncoupling so you're ready to work in seconds.

Fast and flexible

Adaptable: Depending on your needs, you can choose a gasoline (GC-650) or an electric (PC-650) motor as your power unit. Gasoline motors are available with e-starters and pull ropes. Our two-stage power units work with two flow rates for faster travel without load and controlled extension and retraction under load.

Better safe than sorry

Work with two- or four-flow radial piston pumps. Depending on your requirements, up to 4 hydraulic cylinders can be supplied with identical oil flows. Now identical lifting cylinders can be synchronously extended and retracted from the control desk.

Unbeatable strong

The working pressure of compact power units is 530 bar resulting in a very high capacity of the telescopic lifting rams and a compact and lightweight design.

More is less

More space in your service vehicle – easier transport: The tank volumes for the hydraulic power units were adjusted to the relatively low oil volume of the hydraulic cylinders. Your needs determine the optimum design.

➤ Benefits

- + Separate oil flows for synchronised lifting
- + Operating pressure 530 bar / 53 MPa
- + High operating pressure enables compact cylinder design
- + Two working speeds for fast extension without load
- + Controlled extension and retraction speeds under load
- + These high-performance drive units have a compact design for easy transport and space-saving storage

High-performance hand pumps

The robust, two-stage hand pumps are ready at any time in case of an emergency. They offer the option to use the telescopic jacks in environments with a risk of explosion. These high-performance

hand pumps can be used to lift or traverse the load with one or two compact traversing units. With these hand pumps you can work quickly and precisely at all times.

**ZPH 3/8-2D**

Weight	21 kg

The safe command centre.

CU 2DV

CU 2DV – folded

CU control desk

With the new CU 2DV or CU 4DV control desk, you have everything under control – at a safe distance. Move derailed vehicles precisely and easily from one place without having to enter the danger area.

Clear objective: precise control

Thanks to separate oil flows, you can drive each cylinder separately or all of them synchronously, with an oil flow available for each cylinder to give you extremely precise control for safe and synchronised lifting of the load without unwanted counter-movements.

Easy to operate – quick on the job

With its smooth, easy-to-use control valves you can lift, lower, traverse and position rail vehicles while precisely monitoring the forces at all times.

The unit's clear labelling makes handling easier when things get serious. A pressure gauge is assigned to each hydraulic cylinder so you can keep the load under precise control.

Easy handling, minimal space requirements

Well-designed: The new control desk's support frame is foldable to save space in your service vehicle. Choose from two different sizes to meet your requirements.

Benefits

- + Separate oil flows for synchronised lifting
- + Precision force control
- + User-friendly valve arrangement with automatic spring reset (deadman switch) in case of sudden operator incapacity
- + Clearly labelled for ease of use
- + Needs little space: collapsible frame
- + Big base plates for optimum stability
- + Ergonomically positioned handles for easy transport

CU 4DVV

Four cylinders on two rerailing bridges bear the load

3

Possible to shift the rail vehicle simultaneously on two rerailing bridges

4

The wheels are positioned above the rails

5

Lowering and rerailing the locomotive

➤ Your strongest assistants.

➤ Telescopic rams

Beside their enormous strength, our telescopic rams also feature thought-out design. High-strength, light alloy aluminum makes them resistant to corrosion and easy to maintain. Thanks to the telescopic design, they combine long piston strokes with a relatively low height. New handle bars with integrated lifting eyes make the cylinders easy and safe to handle.

Optimised surfaces

The surfaces of the piston rods are hard-anodised to protect against damage; the piston guard plates are corrugated and are made from high-strength steel. Best quality for a long service life – at your side.

Integrated hose-break safety valve

The **LUKAS** hose pairs have an integrated quick stop feature that prevents the uncontrolled lowering of the load, for example if the hose has been damaged.

Perfect coordination

The piston strokes and forces of the various cylinders are coordinated down to the last detail. This means that you remain in control even in difficult situations - fast and safe.

➤ On the job

	HP 10 T 280 R	HP 16 T 160 R	HP 25 T 185 R

The right response to every situation.

Stacking sets

If you are faced with the need of an extraordinary long stroke, the stacking sets can be used to increase the maximum lifting height by up to 495 mm. Depending on the number and height of piston and stacking rings, you can respond in a flexible way with these accessories.

Stacking set for	HP 10/T, HP 25/T	HP 50/T 185 R	HP 50/T 400 R
Stacking ring, number / height	4 / 65 mm	4 / 65 mm	2 / 150 mm
Piston ring, number / height	3/65 mm + 1/45 mm	3/65 mm + 1/45 mm	1/20 mm + 1/123 mm + 1/150 mm
Fork levers, quantity	1	1	1
Max. stroke extension	260 mm	260 mm	300 mm
Total weight	14.5 kg	21 kg	22.2 kg

Stacking set for	HP 65/T 400 R	HP 130/115 R
Stacking ring, number / height	3/133.4 mm	1/110 mm + 4/95 mm
Piston ring, number / height	1/20 mm + 2/135 mm + 1/100 mm	5 / 95 mm
Fork levers, quantity	1	1
Max. stroke extension	400 mm	495 mm
Total weight	42 kg	47 kg

Base plates

Safety first. The base plates increase the jack's ground area and improve its stability many times over. Essential for all lifting tasks!

Base plate for	HP 10 / T...	HP 25 / T...	HP 30 / T...
Weight	7.2 kg	7.2 kg	7.2 kg

Base plate for	HP 50 / T...	HP 65 / T...
Weight	9 kg	24.5 kg

▶ Lifting adapters

Tilt adapter plates

- + Maximum load up to 40 t
- + Tilt angle 5°
- + Weight 1.1 kg

Lift rod adapters

For lifting rail vehicles with lift rods with a radius of 40 mm or 80 mm.

▶ Special jack for low-floor vehicles.

▶ Internal jacks

LUKAS internal jacks are valuable additions to the rerailing concept of vehicles with low ground clearance. Not only in tunnels or in wilderness areas they allow for easy initial lifting. Therefore manufacturers of low-floor vehicles install bayonet adapters in the vehicle floor depending on design and weight.

In this way you can insert the **LUKAS** internal jacks into the vehicle floor with piston facing downwards and extend them slowly. Thus you create enough ground clearance to take over the load with telescopic cylinders or insert the traversing equipment.

▶ Types

The internal jacks are equipped with bayonet fittings.

You can choose between 3 types with different operating pressures and lifting strokes.

- + HP 7/360 R 69kN / 360mm stroke
- + HP 10/250 R 100kN / 250mm stroke
- + HP 21/300 R 204kN / 300mm stroke

HP 21/300 R

HP 10/250 R

HP 7/360 R

All jacks are double-acting and are retracted hydraulically.

The safest way to traverse.

DUO traversing unit

The DUO traversing unit is the only system on the market that allows you to perform the entire operation from a safe distance without manual repositioning, even for heavy loads.

Work stress-free with maximum safety

A locking pin is integrated in the DUO traversing unit. So you can stay outside the danger area while traversing. It is operated from the control desk when locking and unlocking. This safe approach makes it possible to move loads over long distances in both directions.

For you that means time savings and safety since manual repositioning of an arrester is unnecessary.

Depend on it

The DUO traversing unit and the roller carriage are equipped with lateral guides to ensure straight movement along the bridge.

Integrated sliding plates compensate for vehicle bowing during movement of the load.

To ensure optimum stability and prevent tilting of the cylinders, **LUKAS** uses a rerailing bridge with 350 mm width and roller carriages with Teflon-coated sliding plates.

You avoid inconvenient and time-consuming repositioning.

Benefits

- + Work from the control table – at a safe distance
- + Movement in two directions over the entire length of the bridge
- + No manual positioning of arresters in the danger area
- + Minimises working in ergonomically unhealthy postures
- + Integrated sliding plates compensate for bowing of vehicle
- + 90 mm bowing without lowering load and repositioning supports
- + Roller carriage with 4 slots to insert distance bars and the DUO traversing unit
- + 2 adjustable distance bars connect the roller carriages and enable safe traversing on the bridge
- + Low total system weight

① DUO traversing unit

Push/ pull force	170 / 90 kN
Stroke	320 mm
Dimensions*: l x w x h	668 x 360 x 174 mm
Weight	23 kg

① DUO traversing unit, heavy load

Push/ pull force	337 / 207 kN
Stroke	320 mm
Dimensions*	653 x 320 x 186 mm
Weight	42 kg

② Roller carriage

Permissible load	750 kN
Height	112 mm
Weight	42 kg

② Heavy load roller carriage

Permissible load	1,000 kN
Height	140 mm
Weight	62 kg

③ Adjustable distance bars (set)

	Short	Long
Length max./min.	1,830 / 1,030 mm	2,800 / 1,500 mm
Weight	40 kg	58.5 kg

*with guide plates

A secure base for traversing.

Rerailing bridges

The rerailing bridge is used as soon as you have raised the derailed vehicle. You can then move the vehicle sideways with one or two roller carriages and the DUO traverse unit. When the vehicle is in the right position, lower it onto the rails. **Connecting rerailing bridges:** You can extend the bridges with connecting elements, enabling you to respond to various track widths. Important: The connection points must be supported securely.

Height 85 mm (low-floor vehicles)

Length m	1.1	2.2	3.3
Width mm	350	350	350
Weight kg	34	68	102

Height 184 mm

 Full support	350 kN	1,000 kN	1,200 kN
 with 1 m distance between supports	60 kN	500 kN	900 kN
 with 1.43 m distance between supports	50 kN	400 kN	650 kN

On the job

Two bridges can be connected. The connection points must be supported.

Rerailing accessories.

Tilting jack

Depending on the model, you can rerail some vehicles with a HP 25 / K 400 R jack, radius plate and wheel stop with minimal effort. The diagonal stroke movement lifts and traverses the rail vehicle at the same time. The wheel stop stops the traverse movement as soon as the wheels are positioned over the rails. Additionally, the tilting jack is used for uprighting rail vehicles with the lifting belt. For further information see the next chapter, "Uprighting".

On the job

Required components

① Tilting jack HP 25 / K 400R

② Radius plate

③ Wheel stop

Weight	18.6 kg
---------------	---------

Axle pusher

If the wheels are positioned with the wheel flange on the rails, the axle pusher will push the vehicle back into the track. Important: To operate this system you also need cylinder LFM 10/160 and the appropriate piston guard plate. Both components are not included in the scope of delivery of the axle pusher.

On the job

LFM 10/160

	LFM 10/160	Axle pusher
Stroke	160 mm	-
Lifting force	100 kN	-
Weight	3.8 kg	11 kg

Ready for action when a crane is not an option.

Uprighting system

Our uprighting system is the perfect answer in case of an accident with an overturned rail vehicle that cannot be rescued with a crane. This enables you to upright overturned rail vehicles with ease, so that you can subsequently rerail them.

Mode of operation:

You place the lifting belt  around the overturned rail vehicle and fasten it to the frame with a holding rope  and shackle . A jack (HP 25 / K 400 R) and a radius plate  are used to start lifting the vehicle gently and securely. Using the tilting jack  and then the claw jack  lift the vehicle onto the sling before using a second claw jack when the first is fully extended, continuing the uprighting work.

On the job

Lifting with the claw jack

The claw jack is supplied with a base plate so that it can be used to lift loads, such as iron slab trucks.

► Pulling device.

PUD 200

► Separating wedged vehicles with the pulling equipment

The powerful pulling device is used whenever vehicles are wedged together due to an accident. This simple but powerful product can also be used as a fast and safe way to unblock the way when a train is jammed between the walls of a tunnel or bridge or when an obstacle blocks the track.

Huge benefit: The device can be fastened to the rails or a ground anchor, independent from the track width. The pulling device consists of a 9.5 m pulling rope and a pulling jack with holding ropes and rail attachments.

Please specify the relevant rail profile
for your project.

Pulling device	PUD 200
Pulling force	220 kN
Oil volume	1 l
Weight	194 kg

► On the job

➤ For fast and precise rerailing.

➤ Compact traversing unit for light rail vehicles

On a suitable surface, light rail vehicles can be traversed using the compact traversing unit, which allows you to rerail with absolute precision. This is thought through in detail to ensure that your rescue mission runs smoothly and safely. Use one or two units, depending on the weight of the accident vehicle.

➤ Benefits

- + Easy transport thanks to low weight and compact dimensions
- + Fast change of direction directly on the hand pump
- + Moving light alloy sliding plates compensate the bowing of the vehicle
- + Minimal friction resistance thanks to stainless steel sliding surfaces

Transverse movement to	300 mm
Dimensions l x w x h	865 x 375 x 153 mm
Weight	73 kg

Permissible loads:

Single-point lifting: 200 kN (20 t)
i.e. rail vehicles weighing up to 400 kN (40 t)

Two-point lifting 2 x 150 kN (15 t)
i.e. rail vehicles weighing up to 600 kN (60 t)

➤ On the job

Leading emergency pneumatics for initial lifting.

VETTER - Emergency Pneumatics

Our sister company, Vetter, offers worldwide leading emergency pneumatics. Vetter lifting bags are very useful accessories for rail road accidents. With their low insertion height of just 25 mm in certain cases, they are perfectly suited for first lifts. The aramide-reinforced bags are enormously powerful and are capable to lift even large loads: their lifting force ranges from 31 to 68 tonnes per bag. The low weight enables you to respond quickly and flexibly in an emergency.

On the job

➤ eDRAULIC 2.0: Everything else is just theory

In 2010 **LUKAS** changed the world of rescue tools - and is a step ahead again in 2014 with the second generation. We have taken the experience from 4 years of real-life scenarios by real firefighters and incorporated it into improvements that make the original even better. Use our lead to your advantage.

Cutter S 700 E2

Blade opening	192 mm
Dimensions: l x w x h	920 x 296 x 262 mm
Weight*	21.8 kg

Spreader SP 555 E2

Spreading force	52 to 658 kN
Spreading distance	730 mm
Squeezing force	115 kN
Pulling force up to	58 kN
Pulling distance	569 mm
Dimensions: l x w x h	1002 x 265 x 280 mm
Weight*	20.0 kg

Rescue ram R 421 E2

Total lift	750 mm
Piston 1 lift	387 mm
Piston 1 lifting force	127 kN
Piston 2 lift	363 mm
Piston 2 lifting force	60 kN
Retracted length	597 mm
Extended length	1347 mm
Dimensions: l x w x h	597 x 135 x 313 mm
Weight*	19.0 kg

➤ Advantages

- + On-off principle: press the button and start working
- + A complete rescue set that makes power units and hoses obsolete
- + Makes rescue faster and safer
- + Quick switch from mains to battery operation
- + eDRAULIC takes up much less space in your vehicle
- + Approx. 50% lighter than a conventional rescue set
- + Maximum freedom of movement – especially in traffic pile-ups and off-road

* Weight without battery or power supply

The world's leading rescue tools from **LUKAS** are very easy to use and deliver very high performance. Their superior performance makes all the difference when you really need it. On the job. Choosing the right tool is vital when accidents occur with rail vehicles, so that you can create rescue openings and open jammed doors, safely and reliably.

For optimal cutting: Cutters

S 700 - ALPHA CUTTER, S510, S311

This innovative and superior cutter gives you maximum power reserves. Also S 510 and its lightweight counterpart, the S 311, are characterised by a well-balanced set of features that are specially tailored to metal constructions.

On the job

Pulling distance up to	569 mm	665 mm
Pulling force up to	58 kN	55 kN
Oil volume	240 cm ³	425 cm ³
Dimensions: l x w x h	823 x 285 x 202 mm	900 x 380 x 215 mm
Weight	16.2 kg	25.0 kg

Covering large distances: Rescue rams

With the two-stage telescopic rescue rams, you can lift and push material out of the way which is impeding your rescue. For example when rescuing from vehicles or after building collapses.

Telescopic rescue ram	R 420	R 424
Total stroke	575 mm	875 mm
Stroke/lifting force, piston 1	295 mm / 266 kN	445 mm / 266 kN
Stroke/lifting force, piston 2	280 mm / 133 kN	430 mm / 133 kN
Extended length	1,055 mm	1,500 mm
Oil volume	1,410 cm ³	2,139 cm ³
Dimensions: l x w x h	480 x 112 x 211 mm	625 x 112 x 211 mm
Weight	16.8 kg	21.0 kg

High performance power units

P 650 – RESCUE WITH TURBO FUNCTION

Rescue at twice the speed! Every second counts in rescues, which is why **LUKAS** has provided its P 650 series with a turbo function. With a one hand movement you can double the oil flow to one tool in order to work twice as fast. Available with gasoline or electric motors, for simultaneous use of two rescue tools.

SIMO Power (2 tools)

Motor:	4-stroke gasoline motor or electric motor 230 V/50 Hz,
Oil output rate: low pressure/high pressure	Gasoline: 2 × 3.1 l/min - 2 × 0.9 l/min / Electric: 2 × 2.55 l/min - 2 × 0.7 l/min
Turbo oil output rate: low pressure/high pressure	Gasoline: 1 × 6.05 l/min - 1 × 1.7 l/min / Electric: 1 × 5.0 l/min - 1 × 1.4 l/min
Usable oil quantity	4.8 l
Dimensions: l × w × h	485 × 440 × 445 mm
Weight:	P650 SG 42 kg / P650 SE 41 kg

P 630 SG – FOR MOBILE USE

The gasoline-powered P 630 SG is the perfect power unit for all operations requiring mobility. It combines light weight and maximum power in a unique way and also features the turbo function to speed up rescues considerably, making it a friend for all helpers who need to change locations quickly.

P 630 SG

4-stroke gasoline motor	2.2 kW
Oil output rate: low pressure/high pressure	2 × 3.0 l/min - 2 × 0.7 l/min
Turbo oil output rate: low pressure/high pressure	1 × 5.8 l/min - 1 × 1.35 l/min
Usable oil quantity:	3 l
Dimensions: l × w × h	495 × 360 × 445 mm
Weight:	23.9 kg

Auxiliary Car DOLLY

DOLLY XL, M and S – Auxiliary Cars for each Type of Application

Blocked or defective rail wheels and wheel sets of all kinds of rolling stock represent an enormous challenge for rail operators. To avoid follow-up costs the removal of the rolling stock from the track must be fast, safe and without damaging the rail infrastructure and rolling stock.

For this purpose the product line auxiliary car DOLLY is recommended.

A solution for the recovery of rail vehicles has to match perfectly with the existing rolling stock, the railway infrastructure and the rescue concept. Therefore, each auxiliary car is planned and designed individually. Please ask for the questionnaire for the auxiliary car DOLLY in order to prepare an individual offer for you.

In addition to the standard models presented in the following, we can also implement your individual requirements to an auxiliary towing car or rollboy.

DOLLY XL

DOLLY M

DOLLY S

Type	DOLLY XL	DOLLY M	DOLLY S
Typical scope of use	Main line railway vehicles	Main/Light railway vehicles	Metro/light railway vehicles
Typical axle load	25 t	20 t	12 t
Main features	Assembly directly around the defective axle	Tool-free mounting	Tool-free mounting
Lifting of rail vehicle	appr. 30 mm by lifting jack or similar	appr. 200 mm by rerailing system	appr. 200 mm by rerailing system
Weight	appr. 450 kg	appr. 280 kg	appr. 140 kg

On the job

Your strong partner and hydraulics expert

Long-lasting at your side.

Our products are characterised by a long service life and require little maintenance. You can rely on **LUKAS** products to provide strong support in all situations.

Our experience - your benefit.

Since 1948, **LUKAS** has been manufacturing hydraulic products for a wide range of applications. You benefit from this experience to the present day – thanks to sophisticated products and regular innovations that make your work easier.

Optimum support worldwide.

Our worldwide dealer and service network means that there is always a **LUKAS** partner near you. The **LUKAS** team assists our partners at any time, guaranteeing you the best possible advice and support.

Our commitment – Made in Germany.

LUKAS produces its equipment in Germany. That does not just mean final assembly, it means full manufacture. A highly motivated team in Erlangen, is passionate about producing tools for those who face challenges in the field of rerailing and rescue.

Part of the international IDEX Corporation

LUKAS Hydraulik GmbH is part of the international IDEX Corporation which invests in successful medium-sized companies in highly specialised markets worldwide. All companies which belong to the group have two things in common: strong technical orientation and innovative strength.

As our customer, you will benefit from our international practical knowledge and the intensive transfer of skills and know-how within the corporate group which contributes to the development of sophisticated and high-performing products. Make them your first choice – because you never get a second chance!
